Developmentally Appropriate Materials: Scenario

Pretend it is your first day at a new school-age summer camp program. You and the other staff members have been given the keys to your area and three days to prepare it for opening. When you open the door, you are surprised to see a room with furniture but no materials! Follow the steps below to practice filling a school-age learning environment.

Step 1: Review the provided inventory of what is located in the storeroom. Read through the list and highlight the items you think would be a good fit for your environment.

Step 2: Read the provided diagram of a school-age indoor learning environment or use a diagram of your own program. Pick two areas and choose materials from the Inventory List for it.
