

Routes to and from... THREATS-Solutions

Read the scenarios. Identify the threats related to different routes coming and going to your program. Then brainstorm possible solutions.

| Route | Threats | Possible Solutions |
|---|---------|--------------------|
| <p>Alyssa is 9 years old and comes from a school that is five blocks away. You are responsible for picking the children up from Alyssa’s school and walking with them to your program. Alyssa often walks slowly and separates herself from the group. You must cross three roads to get to your location. It is challenging to keep all of the children together.</p> | | |
| <p>Jordan’s father, Brian, is running late to work. When he arrives to drop Jordan off at your school-age program, he ignores your program’s drop-off procedures. You hear his tires squeal as he pulls into the drop-off lane. Rather than entering the one-way drive as he should and parking the car in a space, he pulls into the exit. He leaves the engine running as he rushes Jordan up the sidewalk. While Brian’s car is idling in the exit, no other families can leave. A line of traffic develops.</p> | | |

Amy, Carla and Justin all live near each other and bring their bikes to your program. Their parents pick them up at roughly the same time and allow the children to ride their bikes home together. Today your notice the children begin peddling away without putting on their helmets. They are riding three across the street near your building. Before they turn the corner, you see Carla try to jump the curb and show off other bike “tricks.”
