## Social-Emotional

Thinking about the outcomes of possible solutions to a problem is central to problem-solving skills.

- Again pretend two stuffed toy animals are fighting over a toy. Invite your child to think of several different solutions. For each solution, imagine what might happen if the solution is used to solve the problem. Is one solution better than others?

## Language/Literacy

The first letters children learn to recognize are often letters in their name.

- On a blank sheet of paper, print your child’s first name in large letters using an uppercase letter for the first letter and lowercase for the other letters. Print the individual letters of your child’s name on smaller pieces of paper. Invite your child to match the individual letters with letters in his/her name.

## Self-Regulation

Waiting patiently is a self-control skill used throughout life.

- Help your child think of ways to wait patiently. Some options include humming, singing a song quietly, playing with a toy, or looking at a book. Provide items and supports for your child to practice waiting patiently.

## Mathematics

Comparing the number of items in two groups can strengthen children’s understanding of numbers.

- Create two groups of up to five items each. Examples: shoes and boots; crayons and markers; stuffed animals and blocks. Ask your child which group has more items. Change the number of items in each group and ask which group has fewer items.

## Social Studies

Talking about how your family members spend time together can help children feel better connected to their family.

- Discuss with your child things your family members like to do together. Examples: playing sports, biking, walking, hiking, fishing, camping, or cooking. Recall past gatherings involving your child. Make plans for a next time.

## Creative Expression

Experiences with different paintbrushes can broaden children’s approaches to creating art.

- Provide several different sizes of paintbrushes to support your child’s understanding of how paintbrushes contribute to painting.

## Physical/Health

Galloping is a fun way for children to learn to balance and control their bodies.

- Provide opportunities for your child to practice galloping. A gallop involves taking a large step forward with one foot and leg and then bringing the other foot and leg forward. Use the same foot and leg each time to lead and the other foot and leg to follow.
